

MULTIPLY SWING11 S4P - Option B handoff

BLOCKED - USER ACTION REQUIRED

S4P OUTCOME-BLIND PREFLIGHT ONLY

NO NEW S4 STRATEGY OUTCOMES EXPOSED

PROTECTED VALIDATION REMAINED UNOPENED

To: Indicator: Swing Trades

MWE: MWE-SW11-S4P-001 / 9ddaa698-f607-4b86-b145-6bb0d762d34d

Roadmap: SWING11-RM-1.0; phase S4P; authority E1; ZERO_INCREMENTAL_COST_FIRST.

Terminal: BLOCKED_USER / VERIFIED_OPTION_B_ARCHIVAL_BOUNDARY_SOURCE_BLOCKED.
user_action_required=true; completed_at=NULL. Same envelope retained, not complete.

Authority readback

Option B: SWING11_S4P_OPTION_B_PROSPECTIVE_ARCHIVAL_AUTHORIZATION_V1, decision
650c2556-5b10-437b-9bf6-cdf9af20c29e. Complete decision/rationale/evidence/metadata read directly
from Supabase and independently verified unchanged.

Frozen S4 design: SWING11_S4P_STRATEGY_DEVELOPMENT_PROTOCOL_V1, decision
46b8d99f-db1c-4dec-9f50-a0b1a5f01c4e, likewise read/reconciled unchanged. Seven complete frozen
snapshots are checked against current durable authority by the governed worker.

S4 remains C0 PRICE-only; S4-TIME-5, S4-TIME-7, S4-TIME-10. No RV20, new predictors, tail/entry/exit
grids or 15-session deployment candidate. Modeled primary costs remain 25 bp execution roundtrip +5%
annual short borrow; fixed 12 diagnostic stress views, never candidates.

Work completed and exact revisions

PR #78: prospective metadata collector, closed source registry, frozen universe,
source/price/protected guards, append-only private artifact/readback integration and boundary
proposal.

PR #79: corrected exact research-SHA claim binding and recovered the existing queued job; no
source/scientific change.

PR #80: bounded secret-safe pagination, page timestamps/hashes, duplicate/conflict diagnostics.

PR #81: documented ex-dividend-date filters, independent scope audit, conservative 16-second request
gap, 600-second source budget. No provider upgrade.

All merged with expected-head protection; recovery/paging integration also checked unchanged base.

Research SHA: febc177761fe614eaab06e999af40e89e8c21ab9

Infrastructure/readback SHA: 432e4d55ad65056427b2ada7aa9246bf1dab58c4

Latest research job: bbac227c-c83f-44cb-9c59-59279cd813c7

Latest attempt: 6146d648-8ddd-43c9-8b17-8fae8b11881f; attempt_no=1

GitHub run/job: 37484812483 / 112342013926

Latest workflow: .github/workflows/sw11-s4p-archive.yml

Latest code branch: fix/sw11-s4p-archive-provider-limits; PR #81 merged.

Input dependency count=0; materialized_input_count=0. Metadata sources are immutable output observations, not an admitted scientific market input. Development/B5 lineage unchanged.

Certification

PR #78: 170/170 exact-head online; run 37479781001 / job 112324561821. Local 169 plus one historical Git-object fixture passed online. All 15 triggered compatibility workflows passed.

PR #79: 171/171 online; run 37480995449 / job 112328754402. Local 170 plus one Git-history fixture passed online; all ten triggered compatibility workflows passed.

PR #80: 182/182 online; run 37482753333 / job 112334885313. Local 181 plus one Git-history fixture passed online; 45 shared infrastructure checks in the suite.

PR #81: 186/186 exact-head online; run 37484503805 / job 112340951654. Local 185 plus one Git-history fixture passed online; all 45 shared infrastructure checks passed.

Tests cover exact frozen universe/authority, metadata-only activation, price/outcome rejection, as-collected timestamps, no-event UNKNOWN, secret rejection, failed-body exclusion, closed/unsafe/repeated/credential-bearing cursor branches, immutable manifest hashes, duplicate/version conflicts, request pacing/budget/filter/scope checks, exact research-vs-infrastructure binding. Previous signal/entry/exit/cash/cost/earnings synthetic tests preserved.

Persistent collection mechanism

Dedicated default-branch GitHub Actions; existing Massive/Supabase credentials only, values never printed or persisted. Cadence weekdays 09:15, 15:45, 16:15 America/New_York.

Collector enabled at exact certified research SHA in the SAME MWE. BLOCKED_USER allows this separately authorized metadata archival, not price access or S4 science. First three push-triggered captures verified; future scheduled slots not yet observed/guaranteed.

Actual UTC retrieval time establishes knowledge. Provider last_updated/publication/declaration dates never backdate archived knowledge. Changed observations create new immutable versions; no overwrites. Outages/delays remain UNKNOWN.

At most ten source pages; exact registered HTTPS Massive endpoint and bounded cursor only. Supplied API keys discarded, unsafe/repeated/credential-bearing cursors rejected. No redirects. 2,000,000-byte response cap; global 16-second request gap; 600-second source budget.

Operational windows: earnings/current split metadata next42 calendar days; dividend ex-dates -30/+42 days with documented filters and returned-scope audit. These are collection windows, not frozen scientific sample boundaries.

Each job/attempt stores projections, actual timestamps, provider/event identifiers, expected date/time where supplied, last-updated/status, amount/currency/ex/pay/declaration/split fields, original wire hashes, projected and normalized version hashes, job/run/revisions and coverage/error status.

Full wire bodies NOT retained; whitelisted metadata projections and wire hashes retained. EPS/revenue, arbitrary outcome fields, pagination credentials and failed HTTP bodies excluded. Independent original-wire rehash is unavailable; this limitation prevents claiming unobserved source

semantics.

Append-only existing Supabase private storage/job/attempt/readbacks/events; no new tables or paid infrastructure. General watcher skips dedicated-owned jobs. Queue recovery preserves the existing unclaimed job; completed captures create new immutable jobs.

GitHub cron may be delayed/missed and public-repository inactivity may disable schedules. Actual timestamps/coverage govern; never backfill missed knowledge.

Sources actually observed

First successful source retrieval: 2026-10-06T14:45:00.611846+00:00 (not authorization time). No source maturity clock has begun because practical coverage gates fail.

Latest capture started: 2026-10-06T15:09:16.270035+00:00

earnings: HTTP 403; 0 projected frozen-universe records; pages=1; listing_exhausted=false; requested_window_pass=true; outside_window_records=0; practical_coverage_complete=false.

dividends: HTTP 200; 39 projected frozen-universe records; pages=8; listing_exhausted=true; requested_window_pass=true; outside_window_records=0; practical_coverage_complete=false.

splits: HTTP 200; 0 projected frozen-universe records; pages=1; listing_exhausted=true; requested_window_pass=true; outside_window_records=0; practical_coverage_complete=false.

Latest dividend capture exhausted eight pages, 39 projected records, zero scope mismatches, no HTTP429. Split listing empty/exhausted is NOT certified absence. Earnings403 remains denied. Existing credential availability/authentication evidenced without exposing its value.

Broker/account-specific locate/quantity, borrow fees, recalls and funding: NOT_CONNECTED_UNKNOWN. Complete practical-symbol coverage=0. Indicative public availability, short interest/volume/current quotes cannot substitute for account-specific historical-as-collected locate evidence.

FMP current calendar remains an earlier candidate, but no configured credential/entitlement was established/probed here; not claimed globally unavailable. Timestamped issuer notices and indicative broker feeds are partial candidates, not accepted complete practical ledgers.

Cash-dividend and split observations do not certify share-basis reconciliation, broker dividend debits, corporate-action account ledger or collateral/funding terms. Current split-adjusted values may be retrospective. These remain mandatory source/integration limitations.

Exact prospective boundary recommendation - NOT FROZEN

Collection start: actual first certified successful retrieval; full operational maturity starts only after practical sources/coverage are certified. Never manufacture pre-collection PIT knowledge.

Maturity: 20 complete registered trading sessions, >=95% required snapshot-slot success, >=101/112 frozen symbols fully observed. Every traded symbol needs complete applicable PIT earnings/session/revision evidence; shorts need account-specific availability/quantity/fee/recall; cash-flow/funding must be certified. Observed unavailable is not tradable; missing is UNKNOWN.

Freshness: latest relevant observation precedes decision/entry, required pre-entry/pre-close record age<=30 minutes. Late/post-decision information never used retroactively.

S4: first FIXED 126 registered trading sessions after deterministic maturity/source gates, >=100 usable common comparison dates, >=80% active cohorts and >=5 symbols/side for active cohorts. Missing dates stay in the interval, no extension on results. Then ten S4 endpoint-runoff sessions, no new S4 signals.

S5: next FIXED 252 registered trading sessions after S4 runoff, plus ten endpoint-only runoff sessions. Proposed minimum ≥ 200 usable comparison dates, four chronological blocks ≥ 20 dates each. No extension, reassignment or resizing based on S4/validation results.

Sealing: canonically approve algorithm before future-price admission; publish exact dates once start/maturity mechanically established and BEFORE any S4 outcome exposure. Once protected S5, never moved into S4. Separate frozen S5 protocol/authority still required before any S5 access.

Frozen 112-symbol universe; source-based eligibility enters/leaves prospectively only, no outcome filtering or imputation. Outages append UNKNOWN; stale records do not silently remain complete.

Conditional duration: 418 trading sessions (20+126+10+252+10), roughly 20 months AFTER necessary sources available. No guaranteed ETA, power assertion or favorable-date selection.

Rationale: bounded approximately half-year development/full-year protected reservation supports four-block and ≥ 100 -date capacity rules without outcomes. Proposed maturity/coverage/S5 minimum require canonical judgment.

Alternatives: fixed calendar half-year/full-year intervals simplify date sealing but risk holiday/coverage variation; 252-session development +252-session validation adds roughly six months. No alternative selected. No future date assigned to S4/S5; no future price UUID admitted.

Exact required canonical/user actions

1. Approve/revise complete boundary package (maturity, slots, observed-symbol gate, freshness, fixed intervals/runoffs, minimum dates and irreversible sealing). This is E2 because decision650c explicitly leaves `exact_future_boundary_frozen=false`.

2. Identify/connect existing zero-cost READ-ONLY earnings revision/session/completeness feed and broker/account-specific availability/locate/fee/recall/funding/cash-flow feed/export path. Do not provide credential values in chat. Work can certify within E1 once access exists.

Recommendation: retain the authorized partial collector and prospectively freeze conservative boundaries; complete sources without weakening no-earnings/practical-short gates. If a purchase becomes necessary, separate E2 cost authorization is required; none incurred/requested here.

Neither action alone authorizes S4 science. Remaining practical feed integration, cash-flow/share-basis/funding handling, final future-science schemas and exact-revision certification must pass before a separately authorized execution MWE.

Artifact verification and inventory

All 42 Option B artifacts/readbacks (three captures) and 16 preserved parent artifacts independently reconcile. Latest14: exactly one technical primary (architecture). Thirteen sibling hashes declared in manifest; manifest own hash external, never recursive.

Private bucket trading-research-market-data independently verified `public=false`. Independent GitHub process downloaded every object, recomputed SHA/size, persisted durable readback and read it back. Orchestrator independently recomputed durable-text SHA/bytes through SQL and separate SHA-256 implementation; manifest/ownership/source/readback/run/attempt/input-count parity passes.

attempt2c2c6d90-ea49-4e5e-a5fa-3dfe1ff0a8fa / run37473491473; all six artifacts/readbacks preserved/reverified.

First activation run37480220074 / job112326076258 failed before claim/source request; queued job retained, no attempt invented. Failure event40e39e84-52b3-4f43-b5d0-15ff257e72f2.

Recovered first capture: job7fb1a924-3243-496a-8512-aa4c5975b289 / attempt4c3de8d8-a8f2-4676-88ba-f1f34d6f724f / run37481426125 / GitHubjob112330242394. Fourteen verified artifacts;57 dividend projections; initial listing truncated.

Second capture: jobb8b1d039-5c29-46b2-b058-af3010e6b13f / attemptd24d8908-e523-4154-acbf-a4521fd9b125 / run37483228647 / GitHubjob112336556989. Fourteen verified artifacts;113 current-as-collected projections; HTTP429 and ignored declaration filter detected. Historical event dates are not pre-collection PIT evidence. No source admission; E1 correction preserved all versions.

All prior28 Option B and parent16 complete identities/hashes/readback IDs are in closure-evidence.json, alongside latest14; no deleted attempts/artifacts/events/frozen decisions.

Terminal readback / protected boundaries / cost

Independent terminal Supabase readback: BLOCKED_USER / VERIFIED_OPTION_B_ARCHIVAL_BOUNDARY_SOURCE_BLOCKED; E2 escalation, user_action_required=true, completed_at=NULL; collector enabled; exact boundary unfrozen; future_prices_accessed=false, new_s4_outcomes_exposed=false, protected_validation_access=false.

Blocker/verification event:53f93499-7c57-4552-95c0-2f96a8ca8719, 2026-10-06T15:16:49.464713Z. Full durable handoff stored under existing MWE handoff_json.option_b.

No S4 performance/ranking, price bars, consumed SWING10 B5 price/outcome recycling, protected validation, S5/S6, deployment/paper trading or roadmap transition. Source archival is metadata only.

No new paid compute/service, Cloud Run, provider upgrade/purchase or paid fallback. Existing GitHub Actions/Supabase used. Billing evidence unavailable; literal\$0 invoicing NOT claimed.

Local file-generation runtime became unresponsive after scientific-independent verification. This repository-backed handoff is an alternate delivery path; no science was rerun for file delivery.

Return authority to Indicator: Swing Trades. Do not launch another phase.
